

Agreement of Cooperation for Fair Stone Suppliers

Fair Stone is an international social and environmental standard for the natural stone industry. Its objective is to improve the working conditions in quarries and factories of emerging economies and to satisfy the demand of customers, media and civil society for decent conditions of global production and purchasing.

Increasingly the standard Fair Stone becomes an essential element of global marketing. More and more consumers in Europe and North America expect that all goods are produced under decent conditions in compliance with relevant international and national social and environmental standards. Therefore the implementation of the Fair Stone standard will have a positive influence on your business as well on your supply chain. Transparency and communication is needed to tell consumers and media what we do.

Your trading partners involved in the Fair Stone system as well the Fair Stone team will support you to smooth out the internal process of standard implementation.

In order to implement the Fair Stone Standard (www.fairstone.org) within the supply chain we need your commitment. The management of factories and/or quarries are responsible to implement "Fair Stone" in their production units. They are hereby defined as "Fair Stone Suppliers".

By signing this document Fair Stone Suppliers commit themselves to

- 1. No child work in the quarries and/or factories**
- 2. No bonded labour in the quarries and/or factories**
- 3. Improve working conditions of quarries and/or factories continuously according to the "Step by Step Document"**

Fair Stone Suppliers and Exporters agree to provide all relevant information on the social and environmental situation of the quarry/factory to representatives of Fair Stone and to allow even unannounced visits of Fair Stone representatives to their facilities. They keep record of all written improvements or appoint inspectors to do so. Fair Stone Suppliers start to implement the Fair Stone standard in cooperation with their exporters according to the Step by Step Document. They never label products and materials, which are not produced under Fair Stone conditions and approved by Fair Stone. Fair Stone Suppliers and their exporters are often preferred by orders from Europe and America.

Each labelled consignment has to be registered in the system Tracing Fair Stone. Therefore you will get a special code from Fair Stone. Only after fulfilling initial requirements of Fair Stone and a first pre-audit by our Fair Stone Representative you may mark those consignments with the Fair Stone label which are purchased by the Fair Stone Partner in Europe / North America. Please consider that only those consignments will be labelled which are produced in the production unit registered by Fair Stone.

Data of Fair Stone Supplier and its supply chain
